A strong trough exiting the Rockies lead to explosive development of low pressure during the day Wednesday February 11th. At dawn low pressure near 998 mb formed over southern Missouri. This cyclone deepened to 986 mb as it crossed into southern Michigan by late evening.

Convective showers along an occluded front crossed southern Indiana during the early afternoon. This line brought isolated gusts of 50 to 60 mph. Behind this front, gradient winds increased to 35 mph...with gusts up to 65 mph during the late afternoon and early evening. Scattered structural damage, tree damage and power outages resulted.

A heavy awning was blown off of a home and was blocking Ashland Avenue in Winchester.

A potent cold front associated with a deep trough across central United States moved eastward during the early morning hours of February 27th. A line of severe thunderstorms formed ahead of the cold front and moved southeastward across the forecast area. The bulk of reported damage and severe wind gusts occurred across north central Kentucky with one report near the Kentucky and Tennessee state line where the line of thunderstorms was less intense.
